Canadian Organic Standards Implementation Date Looms

The Canadian Food Inspection Agency (CFIA) deadline for full implementation of the standard is December 14, 2008. The Canadian Organic Standard (The Organic Production Systems General Principles and Management Standards, CAN/CGSB-32.310 and The Organic Production Systems Permitted Substances List, CAN/CGSB-32.311) were released in Dec. 2006 with a two year phase-in. Compliance was voluntary for those two years. It becomes mandatory on December 14. When the standard is fully implemented, operators must be in compliance and certification bodies, including inspectors, must be ready to inspect to the standard. Organic products that do not comply cannot legally be transported across provincial or international borders.

How painful will the transition be? It is in the best interest of the sector to minimize business and trade disruption on December 14, but no one knows. Allowances for stream of commerce are expected. Product in the chain will continue to appear on grocery shelves, perhaps for more than a year, even though labels may not be in total compliance.

Factors adding to the challenge of implementation....

- ◆ The Canadian General Standards Board Technical Committee on Organic Agriculture is responsible for the standard. Many changes that have already been balloted or are in the balloting process will change the earlier published version.
- ◆ Most certification bodies and inspectors lack expertise and experience working with the new standard.
- ◆ The standard is mandatory only for those products crossing provincial borders. Regional certification is expected to continue as before for product marketed within provinces.
- ◆ No one can predict the outcome of equivalency negotiations between the US and Canadian governments. With a stroke of the pen, products certified to the new Canadian standard and the NOP could become legally equivalent, even though there are differences in the two standards. Differences in the crop standards are few, but some are significant. Livestock standards differ significantly. And there are some key differences in labeling categories for processed organic products.

The CFIA is charged with oversight of the Canadian Organic Regime. CFIA will provide training only for its own inspectors for compliance and enforcement. The organic sector will continue to be responsible for training inspectors (called verification officers in Canada's new program). Who will provide this training? IOIA will play a key role. How big that role will be depends partly on the outcome of an ambitious funding proposal. That proposal would rely on a collaborative partnership between COG, IOIA, CFIA and the Organic Trade Association (OTA). [see **Canada**, page 4]

Notes from the Chair

By Bob Durst

I'm going to use this opportunity to go over the results from the survey that all of you folks helped us compile last fall. Thanks to all who responded, since that is the only way we can figure out whether we are really doing the job we need to for all of you.

First special thanks to all the volunteers who put this together (Kelly Monaghan, Sylvia Welke, Chris Kidwell, Diane Cooner, and Sandra Conway). They put a lot of time, effort and thought into this and we all have benefited from their efforts. THANKS.

One of the first things I noticed (because it was the second question in the survey) is that we are all getting older. It is nice to see that there are a significant number of kids (that's anyone under 35 to me because that's how old my kids are getting to be) that are part of IOIA, but it sure would be nice to see those numbers increasing. Let's all work at pointing out to students and younger folks that [see **Notes**, page 4]

In Brief...

IOIA Annual Meeting set for Montreal, Quebec

The Board unanimously supported Montreal as the location of the next Annual Meeting. This decision was based on an overwhelming mandate from the IOIA inspector members on the Canadian Forum. IOIA BOD Secretary Monique Scholz sent an informal query to the Forum asking for a straw poll (Ontario vs. Montreal). IOIA membership is much higher in Ontario (12 Inspector members) than in Quebec (5 members), but Montreal was still a clear favorite, even among the Ontario members.

Founded in 1642, Montreal is a city rich in history and culture. It was the largest city in Canada until the 1970's, when it was eclipsed by Toronto. Montreal was the industrial and financial centre of Canada for more than a century. Many historical buildings in Old Montreal remain in their original form. Some of these are Notre-Dame de Montréal Basilica, Bonsecours Market, and the 19th-century headquarters of all major Canadian banks on Saint Jacques Street.

IOIA was last in Canada for the AGM in 2005 (Vancouver, BC). IOIA typically has the AGM in Canada about every 3 to 4 years. This year is clearly Canada's year. The implementation date for the new Canadian organic standards is December 14, 2008. Quebec has always been a major player in organic certification in Canada. One of the major and longest-running accreditation programs and the new Organic Federation of Canada are both located in Quebec.

Exact date is still undecided, but. If tradition of the past several years is continued, the AGM will take place in early March. Please watch our website and newsletter for date and venue. A little later date would allow winter some time to moderate. Maple syrup season would be an interesting time to visit for those who don't live in maple country. Trainings held in conjunction with the AGM will include Advanced Organic Inspector Training, Training in the Canadian standards for inspectors and certifiers, and possibly Basic Processing Inspection training.

Official language of Montreal is French, so start brushing up!

Membership Directory Updates

Please make the following changes to your 2008 Membership Directory. *Any changes are italicized.* Other parts of the addresses remain the same unless noted. Any additions or corrections to information categories other than addresses and contact numbers can be viewed in the 2008 Online Directory.

The Inspectors' Report is the newsletter of the International Organic Inspectors Association. IOIA is a 501 (c)(3) educational organization, whose mission is to address issues and concerns relevant to organic inspectors, to provide quality inspector training and to promote integrity and consistency in the organic certification process. Editor: Diane Cooner, Box 1259, Guerneville, CA 95446 USA. 707-869-3017, fax 707-869-1478. ioiaweb@ioia.net

Deadlines are Feb 1, May 1,
Aug 1 & Nov 1.
Published quarterly
on recycled paper.

Upcoming Trainings *Watch upcoming IOIA newsletters and the website for details as these and other trainings develop.*

Warren, Vermont IOIA and Vermont Organic Farmers (VOF) will cosponsor Basic Organic Livestock Inspection training at the Sugarbush Inn in Warren, Vermont on **August 19-23**. Following the livestock course, a Non-GMO Verification Training is scheduled on **August 24** in Burlington, Vermont. This event is a collaboration between IOIA, Vermont Organic Farmers (VOF), the Non-GMO Project, and FoodChain Global Advisors. Application is through IOIA.

Gangwon, Korea IOIA and Korea Federation of Sustainable Agriculture Associations (KFSAO) will cosponsor a 4.5 day Basic Organic Process Inspection Training using the Korea Organic Regulation as a reference. The course will be held in Gangwon, Korea **September 29 - October 3**. For enquiries, please contact Isidor Byeongdeok Yu at Ph: +82-10-9133-5431 Fax: +82-2-796-2615 e-mail: community02@hanmail.net

Manitoba, Canada IOIA and Assiniboine Community College will cosponsor Basic Organic Livestock Inspection Training in Manitoba to the Canadian standard. Date has been tentatively set for **October 13-17**. Watch the IOIA website or contact Assiniboine Community College at phone: 1-800-862-6307 or 204-725-8700 from outside Canada.

Corvallis, Oregon IOIA and Oregon Tilth Certified Organic (OTCO) will cosponsor Basic Organic Crop, Livestock, and Processing Inspection Trainings at the LaSells Stewart Center, Oregon State University, in Corvallis, Oregon. The Crop and Processing trainings will run concurrently **October 22-26**, followed by Basic Organic Livestock training **October 27-31**.

Food Processing for the Organic Inspector on the afternoon of **Oct. 26** is open to registrants of both the advanced courses and the basic IOIA/OTCO trainings. This basic food processing seminar will be led by Joe Montecalvo, Ph.D. in Food Science and Human Nutrition/Biochemistry and professor at Cal Poly Tech University, and Robert Durst, MS in Biochemistry and senior research assistant at the Linus Pauling Institute located on the OSU campus. Montecalvo and Durst are both experienced organic inspectors and excellent resource people for other inspectors. This seminar will provide an additional opportunity for those who are taking one or more of the advanced training options but not the Biodynamic course. It is **not** an option for those taking the Biodynamic course.

Advanced Training Options in Oregon: IOIA/Demeter Advanced Training; The Demeter Association and IOIA will cosponsor Demeter Biodynamic® Inspector Training on **October 26-27**. This is the first collaborative training by IOIA and the Demeter Association on the topic of Biodynamic inspection. The training is geared primarily for experienced organic inspectors. A limited number of spaces are also available for new inspectors with knowledge of Biodynamic practices. Demeter will review and approve the final registration list. Demeter is associated with Stellar Certification Services (SCS). SCS was formed to offer organic certification for farms, processors and handlers according to the National Organic Program. Demeter Biodynamic® Certification and Aurora Certified Organic® are options for producers seeking whole farm certification. For more information about the program, see www.demeter-usa.org. The training includes ½ day of International Standards update on the morning of Oct. 26 before the Biodynamic training begins.

- ◆ Non-GMO Project Non-GMO Product Verification Training on **October 28** is offered as a 1-day option for certification agency staff and other individuals as well as inspectors. Participants will receive a Letter of Participation issued by IOIA and FoodChain as official acknowledgement of having received training on this important topic. This is the first year of collaborative training by IOIA and The Non-GMO Project. The Non-GMO Project is developing training for organic inspectors to do non-GMO verifications, most often in conjunction with the organic inspections of the same operation. Training will be delivered by David Gould of FoodChain Global Advisors, the Technical Administrator for the Non-GMO Project. The Non-GMO Project describes itself as a non-profit organization, created by leaders representing all sectors of the organic and natural products industry in the U.S. and Canada, to offer consumers a consistent “non-GMO” choice. For more information about the Non-GMO Project, see www.nongmoproject.org.
- ◆ IOIA/OMRI Advanced Inspector Training on **October 29-30** will prepare experienced inspectors to inspect input materials manufacturers, such as fertilizer companies who produce OMRI approved materials for use in organic production. This is the second such collaborative training in the US. Brian Baker, Ph.D., and Renee Mann will be the lead presenters for OMRI. The training agenda is under development. Tentatively, it will include a field trip to an input manufacturing facility. OMRI requires IOIA training for inspectors working for them in input inspection. Certification agency staff are also welcome to apply. OMRI will review and approve the final registration list.
- ◆ International Standards Update on **Oct. 26** a.m. is available as a half-day workshop for those who wish to learn about the new European regulation, JAS (Japan Agricultural Standard), and the Canadian standards to be implemented by December 14, 2008. This session is included with the 1½ day Biodynamic training, so those who apply for the Biodynamic training need not apply separately.
- ◆ Lodging options include on-campus dormitory or the nearby Hilton Garden Inn. Application forms are posted on the IOIA website. For more information, contact IOIA.

TRANSPORTATION: Nearest Airport is Eugene (EUG), 45 miles. OMNI Shuttle Service is available directly from Eugene to OSU/Hilton Garden Inn (about \$55 each way for the first person, \$5 for each additional person up to 13 people who book at the same time). Allow 1 - 1.5 hours for the trip. Reservations at least 72 hrs. ahead are advised. Call (toll free 800-741-5097) or visit www.omnishuttle.com for more info. Largest major airport is Portland (PDX), 81 miles. Shuttle Service is available directly to OSU and from PDX with departures from the OSU Bookstore, the Hilton Garden Inn, and the Portland airport every 90 minutes. HUT shuttle cost from PDX to OSU is about \$50 each way or about \$95 round trip. Allow 2.5 hours for the trip by shuttle. Call HUT Airport Shuttle (toll free 888-257-0126) or book on-line with a credit card at www.portlandairportshuttle.com. Advance prepaid reservations are required; please reserve at least 24 hours in advance. Actual fares may fluctuate a few dollars up or down based on fuel surcharge. Rental cars are available at both airports. Individuals are responsible for making their own transportation arrangements to and from OSU for the trainings. PDX and the Hut shuttle provide free wireless Internet access and the shuttle has 110v power outlets. Ë

Canada, from page 1

The project proposes a Train-the-Trainer event in Canada, two-day workshops (English and French) for inspectors and certification agency staff, one-day workshops for producers, and one-day workshops for processors. COG would lead the producer training, IOIA would lead the inspector/certifier trainings, and OTA would lead processor workshops. The proposal would make the trainings more accessible and affordable. If the proposal is not successful, IOIA plans a more modest effort: 4 of 5 two-day workshops across Canada in the next 7 months at fee-for-service. In either case, IOIA will do some training at the next Annual Meeting in Montreal next March and some training on both sides of the US-Canada border.

IOIA's membership includes about 240 inspectors in 16 countries. About ¼ of Inspector Members and ¼ of IOIA Trainers are Canadians. Two of IOIA's five current board members are Canadian. IOIA has limited experience with the new standards, but has started this year. Janine Gibson, long-time IOIA Canadian Committee Chair and past IOIA Board member, is actively involved in developing the Canadian standards. Gibson adapted the current Crop inspection training materials used for the NOP training for the IOIA/ACC distance education course in Manitoba in May. Training was provided to the US and Canadian standards. Lisa Pierce delivered the first IOIA on-site Crop Inspection Training to the Canadian regulation in British Columbia in May.

È

Notes, from page 1

there are great careers in the organics and what better way to get a lot of exposure to all facets of the industry than to do some inspections and see what the business is really like.

The international status of IOIA is clear in that 1/4 of our members are outside the US, but we are still an independent bunch with 85% of us not on a certifiers' staff.

You gave us mixed reviews of the inspector accreditation program. It is something that the staff and BOD will be looking at to change it into something that enhances it's value to you folks or decide if it's worth continuing.

The split between farm, livestock and processing seems to be holding about the same, so we're not sure how the growth that the industry is experiencing is being

handled—perhaps more of the inspections are going to staff personal that aren't IOIA members. It seems that we're a very diverse group when it comes to how much of our work/income is from inspections with a nearly even distribution from very little to 100%. Folks are also using their strengths to further assist the industry by consulting, with half of us doing that in addition to inspections.

It is always dicey to survey folks about charges (we don't want to appear to be in collusion to set rates), but the charges indicate that if one spends a good portion of his or her time inspecting that one can earn a decent living at this. Taking the average rate (about \$40/hr) and if one inspected 1/2 time at this (not unreasonable, since there is travel and prep time etc. that has to be taken into account) this comes out to over \$40k/yr. That's about the median household income in the US. Remember to tell those kids inspecting is not a bad job.

What about the job IOIA is doing serving your needs? Trainings will continue to be the primary focus of IOIA, but alternative methods of delivering material and enhanced interaction (like the IOIA Forum) will continue to provide added benefit to all of us as we learn together and support each others efforts. Everyone needs continuing education and especially in this age of \$4 gas, and enhanced internet connectivity, the possibility of doing some trainings without having to leave home as you've requested is well worth investigating. These will never completely replace sited trainings, but for specialty short courses they would seem to be ideal. There were a lot of other suggestions for improving IOIA's value to you (see the website and newsletter for specifics) and we will be looking at these and figuring out how we can address these to enhance the value of your membership in IOIA.

Now it's time for me to get outside into the garden and enjoy a near perfect summer day in Oregon. È

ED, from page 5

for the past 9 years. So I went away, and the staff moved everything out of those two rooms. Rita was in charge of how everything went back in. She added a much-needed second phone line, so if you call on the first line and we are busy, you won't get voice mail. Instead, it rings a second line. Voice mail is now a rare occurrence, as that kicks in only when both lines are busy. She is busy updating our systems and does most of our IT. Rita brings excellent computer

skills and an amazingly calm demeanor even in the face of occasional chaos. She fits right into our sustainable mode, usually riding a bicycle to work. Her hobbies are golf, quilting, and 'following her kids around'. Her husband Mark is the Manager at the local grocery (is it coincidence that we are seeing more organic produce there ☺?) and coaches baseball. Rita and Mark both grew up in Broadus.

Teri Lindberg

Teri Lindberg fields calls to the IOIA office the same way she does everything, with a big smile! Teri came to the IOIA office in early January. She works part-time (about 2 days per week). No matter what she's asked, she takes it on cheerfully and with amazing efficiency. First she took over the financial bookkeeping. The BOD and I had agreed with the finding of our 2007 auditor, who suggested that we needed more financial oversight and more distance between the ED and the money. Teri's experience at our accountant's office for the past 3 years was a great asset. In May, when Rita came on board, Teri switched to a very different but equally important role. Her primary role will be assisting with the management of IOIA-managed trainings and Cosponsor-Managed trainings in the US. Sacha will continue to administer the international trainings. Teri and her husband Kyle operate a sheep and cattle ranch near Alzada, about 60 miles from Broadus. Wow, what a commute?! Fortunately, her daughter Brooke is still in high school for one more year, so the women maintain a separate household in Broadus during the school year. Her

Teri on the Call

commute is only a few blocks. An older son, Mitch, is in college. Teri has secretarial, website, and computer training. One of her goals is to take organic livestock inspection training within the next year.

Susan Colwell

If you are interested in the IOIA Fundraising effort, please contact Susan at sgcolwell1@gmail.com. Also watch for a complete news article and photo next issue. You will find her very open to ideas. È

Notes from the ED

By Margaret Scoles

Summer: Summer weather here was extraordinary. We had rain, more rain, and the best hay season in recent history. A welcome change. We are always a few hot days from a drought here. Peas and potatoes grew well in the cool wet weather. But the tomatoes and peppers are so late that I'm beginning to worry about my winter salsa supply. We've had some terrible hail storms in the area, but we were spared right in Broadus. Cloudbursts were so violent that there was even a related death from a road washout.

I've been home this summer. That might not sound like news, but it is unusually good news for me. The IOIA office busy season is the opposite of the busy inspection season. Things are quietest here during the summer. It gives us time to work on those projects that are important but not as urgent. I think of Luis Brenes whenever I think of the difference between urgent and important tasks. While he chaired the BOD, he helped us through an exercise about urgent vs. important and setting priorities. So often, we allow our time to be eaten up by the urgent work (some of which is not important) while more long-term important work gets neglected. One always needs to remember to consider how important a project is, as well as how urgent it is. It is so easy to put things off because 'there isn't enough time'.

A highlight of my 'other-than-IOIA-life' was moving my elderly aunt to Broadus in May. She is now right around the corner from us and doing great. We've enjoyed planting flowers and working in the yard together. Another highlight was taking 3 days of vacation in June with my son, who came home from his work for a sculptor to build fence with me at the ranch. It was great. Three days with no cell phone and no Email! Three more days were spent traveling to central MT to be with my nephews (aged 11 and 12) for their county fair. My oldest nephew is a poultry nut--- all kinds of chickens, India runner ducks, raising pigeons. You name it, he plans to raise it. I'm proud to say that he is an 'egg snob'. He can't understand how people can eat those regular eggs from the grocery store.

Some Important Projects: Grant Proposal for Canadian trainings with COG and OTA; developing the new

promotional brochure for IOIA with Rebecca McClellan; working with Susan Colwell on fundraising development; working with the Processing Curriculum Advisory Committee to standardize processing curriculum; and lots of trainings. See the Training Schedule on page 3 for details about Vermont and Oregon. Oregon promises to be the largest and most complex training ever.

Interesting reading: The complete and unabridged results of the IOIA Membership Survey. Please take the time to study it (see Inspectors Only section of the website). This is a valuable resource. Over 1/3 of our Inspector members took the time to complete it. Based on responses, it appears that almost everyone who ever applied for IOIA accreditation or is accredited took the survey. I think it is a good juicy slice of the opinion of the long-time and seriously dedicated members.

Fun: The first IOIA **Cross Border Social** is planned for Saturday, August 23 at 5:00 p.m. When I read the membership survey, I noticed that inspector members asked for additional ways to network, update, and socialize. Some mentioned that these are needed beyond the AGM, which is always located in a far-flung place for most of our members (by the nature of our far-flung membership). The idea for a social event grew out of conversation with Maarten Samsom, IOIA member. In conjunction with the upcoming training events in Vermont, Maarten will host a social gathering for IOIA members with organic barbeque at his home near Enosburg Falls, VT. He lives about 50 minutes NE of Burlington or 30 minutes from the Canadian Border Crossing at Philipsburg, QC. **It should be noted that Maarten built his home, and designed it around the kitchen, as he is also a gourmet cook and loves to entertain.** If our invitations have missed you so far, please consider yourself invited. RSVP to IOIA office or Maarten. Maarten's contact info: Phone - 802-933-2195; maarten@samsomassociates.com.

IOIA's Name Change: It's official. We've received confirmation in July from the Minnesota Secretary of State, approving our request for amendment of the IOIA Articles of Incorporation to the

new name. The last step is to file the name change with the 2008 IRS tax return early next year.

Organic Producer Magazine (publicity opportunity): We were contacted by this magazine with an interesting proposal. They are requesting 'inspector stories', and opinion contributions from IOIA and inspectors. Typically oriented for producers, especially new and transitioning producers, they tried a feature for the past year with OTCO and OCIA called "Ask a Certifier". They want to try that Editorial focus again for the next year (2008-2009) broadening it to "Ask a Certifier/Inspector". In exchange for our contributions, we get good exposure for both IOIA and organic inspectors, plus a full page ad in each issue. The website is www.organicproducermag.com. If you are interested in helping with story ideas, or stories, please contact me.

IOIA Welcomes Rita Wenzel as IOIA's First Office Manager

IOIA has a long history of stretching a budget about as far as one can be stretched. We've tended to add staff after they were needed not before! Perhaps long over-due, but finally a reality, IOIA has a nearly full-time Office Manager. Rita Wenzel joined the IOIA staff in late May. She works 4 days per week (Mon. through Thurs.) so her voice is the most likely voice that you will hear when you

call. Rita has been working for the past 9 years at the office of David Gardner, CPA. She was our QuickBooks troubleshooter during that time. She quickly took over the roles of IOIA bookkeeper, Membership Services, and many, many other duties. One of her first duties was to reorganize the office. The lovely hardwood floors of the IOIA office were showing a lot of wear in the two rooms IOIA occupied [see ED, page 4]

Sector Meets With USDA on Farm Bill

In an historic meeting arranged by the Organic Trade Association (OTA), representatives of the organic community met with the U.S. Department of Agriculture (USDA) Farm Bill Implementation Team on August 13 to discuss the implementation of organic provisions within the 2008 Farm Bill.

"This was an historic opportunity to present key information on the significance of these organic provisions to the team charged with developing the rules implementing the Farm Bill," said David Gagnon, OTA's Interim Executive Director.

The OTA-led group included representatives of the Organic Farming Research Foundation (OFRF), National Organic Coalition, Center for Food Safety, Rodale Institute, National Center for Appropriate Technology (NCAT), Food and Water Watch, Sustainable Agriculture Coalition, and Florida Organic Growers.

The meeting was co-hosted by USDA Deputy Under Secretary Floyd Gaibler of the Farm and Foreign Agriculture Services and Lowell Randel, Deputy Assistant Secretary for the Office of Congressional Relations. Also attending were agency representatives from the Agricultural Marketing Service, National Resources Conservation Service, Foreign Agricultural Service, Risk Management Agency, Agriculture Research Service, and the Cooperative State Research, Education and Extension Service.

During the meeting, OTA spokespersons and other participants stressed the importance of National Organic Program funding, organic production and market data, research needs, organic crop insurance provisions, the national cost share certification program, and provisions for organic agriculture in conservation programs. Particular emphasis was given for a well-implemented nationwide USDA support system for conversion to organic agriculture.

"This meeting was very important as we shift from legislative advocacy to the hard work of implementation. Our wins in the Farm Bill must be integrated into each agency's work plan as directed by the USDA leadership, but it won't happen automatically," said Mark Lipson, Senior

Policy Analyst for the Organic Farming Research Foundation. He added, "The broader organic community must continue to work together, share the workload, and present a united front. This is essential to our success."

The USDA Farm Bill Implementation Team is charged with crafting 70 Farm Bill implementation rules by 90 days after the June 18 enactment date of the 2008 Farm Bill, including the conversion provision.

News on NOP Site

There are all kinds of new items listed in the news section of the National Organic Program. Keep on top of events by bookmarking this link:

<http://www.ams.usda.gov/AMSV1.0/ams.fetchTemplateData.do?template=TemplateA&navID=NationalOrganicProgram&page=NOPNationalOrganicProgramHome&resultType=&topNav=&leftNav=NationalOrganicProgram&acct=nop>

Contaminated Ginger NOP issued an updated statement to all ACAs related to the ginger found to be contaminated by metabolites of the insecticide Aldicarb. On July 25, 2008, Frontier Natural Products Coop voluntarily issued an urgent "mandatory Class 3 recall" to all of their customers who received the contaminated ginger or products containing this ginger.

Accreditation renewal decisions NOP has made accreditation renewal decisions on a first round of certifying agents. Talking points and a table of the renewal status of all ACAs, are posted in the Newsroom.

New Fact Sheet on Textile Labeling under NOP look in the NOP Reading Room and NOP Fact Sheets pages.

The NOP-AQSS site has been reformatted and new questions have been added to the following topics: Certification; Crops; Labeling; Livestock; National List of Allowed and Prohibited Substances.

USDA Recognizes Japanese MAFF Under NOP The USDA Agricultural Marketing Service (AMS) has approved the Government of Japan's Ministry of Agriculture, Forestry and Fisheries as a competent body to accredit organic certification agencies to certify Japanese

organic products according to the NOP. These determinations allow organic certification organizations in good standing to apply the NOP technical standards to certify operations that produce or handle agricultural products that will be sold, labeled or represented as organic in the United States. Production or handling operations certified by MAFF may only use the USDA organic seal on their products when those products have been produced and handled in accordance to the NOP regulations. The recognition agreement allows certifying agents accredited by MAFF to certify organic production and handling operations located in Japan. Certifying agents accredited under this recognition agreement will be posted on the NOP website under International Issues, Export Arrangements and Recognition Agreements.

NOP has filed a complaint against a certified organic operation, alleging willful violation of OFPA and NOP regulations.

The AMS press release notes that on June 4, USDA's Agricultural Marketing Service (AMS) filed a formal administrative complaint with USDA's Office of Administrative Law Judges against Promiseland Livestock, L.L.C. and Anthony J. Zeman, Promiseland's owner and manager.

The complaint alleges willful violation of the Organic Foods Production Act (OFPA) and the USDA National Organic Program (NOP) regulation with respect to providing USDA with access to records.

USDA alleges that Promiseland failed to comply with section 6506(b)(1)(B) of OFPA and sections 205.103(c) and 205.400(d) of the NOP regulation (7 CFR 205) which deals with recordkeeping requirements and USDA's right to inspect and copy such records during normal business hours.

Promiseland and Anthony Zeman have 20 calendar days from receipt of the complaint to file their answer.

Draft pasture rule sent to OMB The NOP proposed rule on pasture requirements for ruminants has been sent from USDA to the Office of Management and Budget (OMB). Since the rulemaking is considered economically "significant," OMB will review the docket over the next 60-90 days and return it to USDA either

for clarification or publication in the Federal Register, so it could be late fall or winter before it is published in the Federal Register.

Climate change impact on agriculture:

The USDA announced in a [Federal Register notice](#) that it has prepared a scientific assessment on the effects of climate change on U.S. agriculture, land resources, water resources and biodiversity. USDA is accepting public comments until Sept. 19.

<http://edocket.access.gpo.gov/2008/E8-18112.htm>

DiMatteo Elected IFOAM President

Katherine DiMatteo, who served as executive director of the Organic Trade Association (OTA) from 1990 to 2006, was named President of the World Board of the International Federation of Organic Agriculture Movements (IFOAM) at IFOAM's General Assembly held in Vignola, Italy, on June 24.

"OTA congratulates IFOAM for choosing Katherine DiMatteo, who during her tenure at OTA became the principal spokesperson for the organic business community in the US and a respected global leader, particularly in helping build consensus on organic standards and practices." said Caren Wilcox, OTA's current Executive Director, who took part in IFOAM's General Assembly in Italy. OTA is a member of IFOAM.

IFOAM is the worldwide umbrella organization for the organic movement, uniting more than 750 member organizations in 108 countries. IFOAM, through its General Assembly, helps guard organic credibility and integrity worldwide. Other members on its current ten-member World Board are from Australia, India, Italy, Japan, Malaysia, Peru, the Philippines, Switzerland, and Uganda. DiMatteo has served as a member of the World Board for the past two years.

"I am pleased and honored to have been elected to the IFOAM Board and to serve as President," says Katherine DiMatteo. "I look forward to working with the very skilled individuals elected to the IFOAM World Board and to helping IFOAM's Executive Director Angela Caudle de Freitas grow the organization. My top priorities are for IFOAM to become a strong advocate for organic agriculture at all levels, to foster harmonization,

equivalence and equitable trade, and to facilitate discussions on the future of organic."

Ecuadorian Assembly Approves Constitutional Rights for Nature

On July 7, the 130-member Ecuador Constitutional Assembly, elected countrywide to rewrite the country's Constitution, voted to approve articles that recognize rights for nature and ecosystems.

"If adopted in the final constitution by the people, Ecuador would become the first country in the world to codify a new system of environmental protection based on rights," says Thomas Linzey, Executive Director of the Community Environmental Legal Defense Fund.

The following clauses will be included in the constitution that will be submitted to a countrywide vote, to be held 45 days after Assembly finishes its work later this month:

Chapter: Rights for Nature

Art. 1. Nature or Pachamama, where life is reproduced and exists, has the right to exist, persist, maintain and regenerate its vital cycles, structure, functions and its processes in evolution.

Every person, people, community or nationality, will be able to demand the recognitions of rights for nature before the public organisms. The application and interpretation of these rights will follow the related principles established in the Constitution.

Art. 2. Nature has the right to an integral restoration. This integral restoration is independent of the obligation on natural and juridical persons or the State to indemnify the people and the collectives that depend on the natural systems.

In the cases of severe or permanent environmental impact, including the ones caused by the exploitation on non-renewable natural resources, the State will establish the most efficient mechanisms for the restoration, and will adopt the adequate measures to eliminate or mitigate the harmful environmental consequences.

Art. 3. The State will motivate natural and juridical persons as well as collectives to protect nature; it will promote respect towards all the elements that form an ecosystem.

Art. 4. The State will apply precaution and restriction measures in all the activities that can lead to the extinction of species, the destruction of the ecosystems or the permanent alteration of the natural cycles.

The introduction of organisms and organic and inorganic material that can alter in a definitive way the national genetic patrimony is prohibited.

Art. 5. The persons, people, communities and nationalities will have the right to benefit from the environment and form natural wealth that will allow wellbeing.

The environmental services cannot be appropriated; its production, provision, use and exploitation, will be regulated by the State.

"Public organisms" in Article 1 means the courts and government agencies, i.e., the people of Ecuador would be able to take action to enforce nature rights if the government did not do so.

This is particularly exciting because it takes the idea of individual human rights, and gives them to entities systems that are hard to define either as individual or human. As to what this means in practice, and whether it's adopted in the final constitution, we'll have to see. But as to what this means in theory, it's already revolutionary.

ATO to Co-locate with Latina/Asia Show

The Organic Trade Association (OTA) has announced that The 2009 All Things Organic™ Conference and Trade Show will be co-locating with two cultural food events - Expo Comida Latina and All Asia Food – on June 16-18, 2009, in Chicago at McCormick Place. Expo Comida Latina and All Asia Food are the leading Hispanic and Asian food shows in the market. The synergy of these events will bring into focus the two fastest-growing segments of food sales in North America: organic and ethnic & specialty foods.

ATO has grown from 100 booths and 1,000 attendees in Austin in 2001 to over 600 booths and an organic buying audience of 12,000 in Chicago in 2008. The show will move to a two-day format (June 17 and 18), allowing time for buyers to visit the show floor and increasing exhibitor's available time to attend important conference sessions and network with peers. E

IOIA/COABC Basic Organic Crop Inspector Training

Kwantlen College, Langley, British Columbia, Canada - May 26-30, 2008

This was the first IOIA inspector training to be completed using Canadian Organic Regime (COR) as a reference. COR consists of: Organic Products Regulations, Organic Production Systems General Principles and Management Standards (CAN/CGSB-32.310-2006) and Organic Production Systems Permitted Substances List (CAN/CGSB-32.311-2006). The course was sponsored by the Certified Organic Associations of British Columbia (COABC). COABC is the provincial organic accreditation body that serves as an “umbrella” for 11 regional certification bodies in the province. Lisa Pierce was the IOIA Trainer for the course and was assisted by Sarah Davidson (IOIA inspector member and administrator for BC Association of Regenerative Agriculture – BCARA)

The following is an excerpt of an article written by **Deb Foote** for the BC Organic Grower. Deb has been an active member of the organic community in BC for several years and is past president of COABC.

What role does IOIA play in British Columbia? The rules are pretty clear - here is what we agreed to: BRITISH COLUMBIA CERTIFIED ORGANIC PRODUCTION OPERATION POLICIES AND MANAGEMENT STANDARDS VERSION 8 2007 Book 1 Annex 1 – 2.4.2 1) A certification body must use verification officers that are members in good standing with IOIA and are qualified for the assignment i.e. training and experience for inspecting crops, livestock and processing operations as appropriate. BRITISH COLUMBIA CERTIFIED ORGANIC PRODUCTION OPERATION POLICIES AND MANAGEMENT STANDARDS VERSION 8 2008 Book 1 Annex 2 - 6.3.2 3) b) i: Verification Officers shall be members in good standing of the Independent Organic Inspectors Association. This requirement ensures that VOs have relevant professional training or experience in compliance with the Quality Management System requirements.

Why did COABC sponsor training? Over the course of 2007 the COABC Board of Directors engaged in numerous discussions regarding the inspector community in BC. Concern was expressed that there were not enough IOIA trained inspectors in the province and that it was the obligation of COABC to ensure that this was corrected. The directors asked Karen Fenske (COABC Administrator) to take corrective action.

From my research there are 18 IOIA member inspectors living in or operating in BC. Of those I identified, four are not actively inspecting and two others are contracting their services to another organic cause at the present. That leaves 12 inspectors for 600 plus operators. Notice went out to the organic community in BC and subsequently across the country, announcing the training program for the spring of 2008. Applications were submitted to the COABC who along with the IOIA representative (in this case Lisa Pierce - our trainer extraordinaire) scrutinized the applications to determine the eligibility of potential students.

What did we learn? Even before arriving in Langley we had our work cut out for us. Karen sent out a package in late April which included a set of pre-course assignments, a copy of the IFOAM/IOIA Organic Inspectors Manual as well as copies of CAN/CGSB 32.310-2006 and CAN/CGSB 32.311-2006 (better known as the Canadian Standards and Permitted Substances lists) along with the USDA National Organic Program Standards and Permitted Substances lists. In addition there were a couple of other reference documents and handbooks all of which fed into the pre-course assignments.

The course was well organized and executed. We had 5.0 days to cover a whole lot of material, including a 3 hour written exam and another 3 hours spent doing a mock inspection (any one who scored high on the inspection is going to be an excellent inspector – it was a challenge to have 10 inspectors interviewing 1 farmer ...)

The course covered: Organic Systems Terminology, Working with the Canadian Standard, Inputs and the PSL, How to Conduct an Inspection, Crop Yield Calculations, Risk Assessment and OCPs, Biodiversity, Ethics and Code of Conduct, Record Keeping and Conducting and Audit Balance, Effective Communications, USDA NOP compared to COR, and as noted previously a Mock Inspection and Inspection report.

The Outcome The group of students who attended the program proved to be a highly enthusiastic lot and we are all anxious to get out into the community and to start inspecting. The next challenge we face is in either setting up to apprentice with one of the 12 to 18 members of the IOIA member inspectors who are operating in the province, or alternatively arranging to do 10 crop inspections along with a letter from a CB attesting that 10 inspections have been completed. It is our sincere hope that the CB administrators will ensure that we are given opportunity to get the experience required to complete this final stage of the process of becoming an IOIA member inspector. E

IOIA Holds First Industry Training in Boulder

At the request of The Hain Celestial Group, Inc. (Hain Celestial), IOIA put on its' first ever 'industry' training event, in Boulder, Colorado May 19-23. Fifteen high caliber attendees, all from Hain Celestial worldwide facilities, attended Basic Process Inspector Training. Building upon their existing extensive knowledge base, they will be using their new skills and knowledge implementing internal organic audit programs, preparing Organic System Plans and maintaining organic compliance throughout the HCG. The training was held at the Celestial Seasonings plant, where inspiring art work and delightful hot beverages are never in short supply!

The lead trainer for this session was Monique Scholz. IOIA ED Margaret Scoles was present as an additional field trip group leader. Field trip locations were both within Hain Celestial, at the Celestial Seasonings herbal tea plant itself and at WestSoy, a recently acquired tofu manufacturer located close by. Both facilities have been producing organic lines for many years and were excellent hosts for the training groups.

Special thanks to Ken Milman, Corporate Director of Quality Assurance and Safety at Hain Celestial, for initiating and making arrangements for this ground breaking opportunity for IOIA. Thanks to all the participants for their provocative questions, attention to detail, and sense of humor on those long days.

IOIA/MOFGA Basic Crop Training Experiences Unity in Maine

By Brenda Hedges

The Maine Organic Farmers and Gardeners Association (MOFGA) cosponsored a Basic Crop Training Course July 14 -July 18, 2008 at Unity College located in the hamlet of Unity, Maine. Garry Lean was the trainer for the course. He was assisted by Mary Yurlina and Kate Newkirk, both staff members of MOFGA's certification program. A diverse group of eleven participants came from places as far away as Montana and Iowa; with four participants from Maine.

A majority of participants stayed onsite in the Maplewood dorm with locally sourced meals served in the college cafeteria. Participants were treated to fresh Maine strawberries and blueberries as well as fresh local greens.

Although there were a few minor challenges with the facilities (i.e. no hot water one day); the warm sunny weather that was the norm for the week helped all the participants enjoy the expansive and peaceful campus.

The participants ranged from seasoned inspectors to administrators to hopeful inspectors to be. Despite the heat and small classroom space; everyone cooperated to make the training enjoyable. Gary interjected small group sessions and role playing skits to keep everyone interested and participating. Discussions were varied and lively with many real life examples.

The entire class visited a mixed vegetable farm for the field trip and inspection practice. Participants eagerly asked questions and enjoyed the opportunity for hands on learning.

It was an intensive week with a lot of material to cover and we all came away with a much deeper understanding of organic practices and standards. E

KOIA Grets First Anniversary

Congratulations to unofficial 'sister affiliate' Korean Organic Inspectors Association (KOIA), which was founded in February 2007.

IOIA and the Korean Federation of Sustainable Agriculture Organizations (KFSAO) have cosponsored five trainings in less than 2 years. IOIA Trainers to date have included Lisa Pierce, Mutsumi Sakuyoshi, and now Isidor Yu of KOIA. Isidor is one of the newest IOIA Trainers.

The participants of trainings held since 2006 in Korea assembled in autumn last year. They organized the Foundation Assembly in Seoul. Many organic inspectors attended the Assembly. They all agreed to make a new organization which can develop Korean organic inspectors' technology and protect their interests.

KOIA now has around 50 members and their leaders have contributed the progressive inspection methodology to other organizations. Korea Environment-friendly Certifiers Association requested a 3-day training to KOIA. Korea Food Research Institute held two trainings for the organic inspectors' first activity supported by the new food relevant law through KOIA trainers.

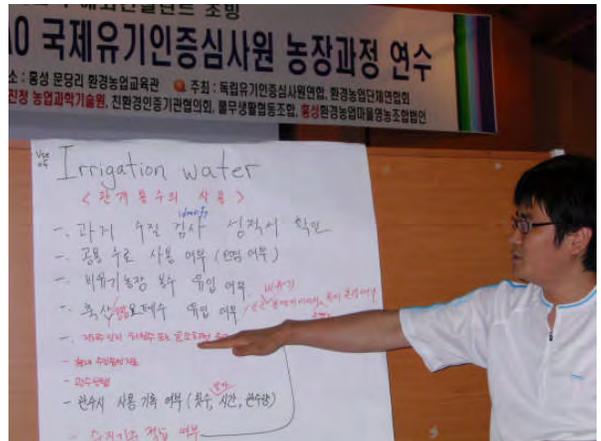

From left, Isidor Yu, Mr.Han Jungyeol, chairman of KOIA, Mr.Park Sunghoon, vice-chairman of KOIA, Ms.Hong Hyegyong, a trainer of KOIA, Mr.Son Byunghong chief of P.R. department

At the July 8-12 basic crop inspector training

Although IOIA has yet to formalize the status of 'sister affiliate' status, IOIA recognizes two affiliates informally - Japan Organic Inspectors Association (JOIA) and KOIA. JOIA celebrated its 10th birthday in 2007 and has been a supporting

member of IOIA since the beginning. IOIA needs to create the structure for the 'sister affiliate status'. We expect KOIA and JOIA's active movements in their bioregions. ☺

Basic Farm Inspection Training, Miyagi Japan

IOIA/JOIA Basic Farm Inspection Training course was held in Hotel Epoka, Kurikoma Kogen, Miyagi, Japan with 18 participants on May 28-30. Trainers were Sanae Ota (Lead trainer in JOIA), Yoshimichi Takahashi (Assistant trainer in JOIA), and Mutsumi Sakuyoshi (Trainer for both IOIA and JOIA).

Field trip host was a JAS Organic certified rice grower's farm. Trainers and hosts set up some 'traps' to add to the complexity of the field trip. They left some chemicals for the inspectors to find, and arranged an inconsistency between the information regarding water supply from the grower and spouse. Trainer Mutsumi reported that the Trainers learned to keep the number of traps very small: "It was difficult. It is better to make a simple trap, but an elaborate one." Success for this training was a better field trip experience and better reports. Mutsumi reported that they consolidated their two field trip groups for an extensive debriefing. At first they were concerned that reports might end up too similar. But they found instead that not only were the reports not overly similar, they indicated a higher level of comprehension than at previous trainings. ☺

IOIA Caps Now International

IOIA has a brand new batch of 100% organic cotton caps! The caps are made in the US and come in 4 colors – Black, Forest Green, Navy and Khaki. They're adjustable and have our logo embroidered on them. Let everyone know we're INTERNATIONAL with a new IOIA cap! See page 23 for ordering details or purchase off our website, www.ioia.net, in the Books & Goods section.

Isidor Yu of Korea bought the first one, which we're sure he'll be wearing to the next IFOAM General Assembly, which will be held in Korea in 2011.

Strengthening Our Organic Roots

A Report from the 2008 IFOAM General Assembly in Modena, Italy
By Jim Riddle and Joyce Ford, with excerpts by Elizabeth Henderson, NOFA

On June 22-24, delegates from around the world gathered at the historic Vignola Castle to determine the future of the International Federation of Organic Agriculture Movements for the next three years.

The Modena gathering was the largest and most diverse IFOAM congress ever held with over 1200 participants from 100 countries. The IFOAM General Assembly was also the best attended yet: sixty percent of the IFOAM members were present or represented by proxies. There were 248 voting members from 69 countries with about 90 proxies.

The gathering was marked by lively debate, inspiring addresses, and sweltering heat. (Luckily, the Korean delegation had distributed promotional fans, which helped delegates cope.)

There were 27 candidates for 10 seats on the IFOAM World Board (WB). Yours truly came in 11th by one vote! Only 3 incumbents were re-elected. Katherine DiMatteo, former Executive Director of the Organic Trade Association, was re-elected, and then went on to be selected by the WB to serve as IFOAM's new president. Vice-presidents are Urs Niggli of Switzerland and Roberto Ugas of Peru. With sixteen tracks of workshops running simultaneously, there was no way to encompass them all. The International Society for Organic Agriculture Research (ISO FAR) accounted for six of the tracks devoted to reports on the impressive amount of organic research from universities around the globe. The compilation of abstracts for the entire congress runs over 500 pages. Readers can consult the Book of Abstracts, available at www.ifoam.org.

The first two days of the Congress opened in a huge tent with plenary sessions devoted to IFOAM's four principles of organic agriculture: ecology, care, fairness and health. Jorgen E. Olesen and Vandana Shiva spoke on ecology. After reviewing the mounting evidence that organic agriculture uses less energy than conventional agriculture, Olesen, a Danish professor of agro-meteorology,

challenged IFOAM to reduce international trade. Support for organic business is fine and a source of revenue, Olesen said, but in conflict with the principle of ecology. In her usual fiery and brilliant style, Vandana proposed changing the pyramid of life to put bacteria instead of human beings at the top. Ecology means understanding the power of biodiversity: in our world "everything is something else's food." On the principle of Care, Tewelde Berhan Gebre Egziabher urged us to make soil replacement the central issue. Carlo Petrini, founder of Slow Food, punctuated with emphatic gestures his passionate summons to understand the essential connection between producers and consumers.

Much of the debate during the General Assembly (GA) focused on an unfinished proposal from the previous World Board to revise IFOAM's Organic Guarantee System, moving away from the IFOAM Basic Standard to a vague "family of standards" concept. Delegates were generally cool to the idea (despite the heat), and approved numerous motions, which re-affirmed the membership's authority over the direction of IFOAM.

Here are some of the motions approved by the General Assembly:

Motion 15.1: The GA instructed the World Board to develop a position paper on the use of organic seed and propagation materials in Organic Agriculture.

Motion 15.4: The Assembly required that the World Board formulate a clear IFOAM policy position opposing the Patenting of Living Organisms, particularly in plants and seeds in Organic Agriculture, these being a threat to biodiversity.

Motion 20.5: The General Assembly expects the "IFOAM Basic Standards" to be maintained, developed and regularly revised, as they are IFOAM's identity and protection of its integrity.

Motion 26.1: The GA confirmed that cell fusion, including protoplast, and/or cytoplasm fusion breeding techniques, do not comply with the principles of organic agriculture. Therefore, the GA urged the World Board to develop clear guidelines on how to deal with varieties derived from cell fusion including protoplast and/or cytoplasm fusion breeding techniques.

Motion 29.2: IFOAM will develop a proposal to be submitted to funding agencies for the development of a study on how to include the gender perspective in all development projects or Organic Agriculture where donor and/or government money is used.

Motion 29.6: The GA requested the WB to propose ways of giving more weight to the representation of farmers' membership organizations, thus reflecting their real weight and value and decision-making rights in the IFOAM.

Motion 29.7: IFOAM, and the World Board, will support, educate and advocate regarding Grower Group Certification in order to obtain recognized and legal status worldwide for small holders, family scale farmers and other small-scale process/handlers. If, or when other groups are considered for an ICS system, additional criteria will have to be proposed, discussed and agreed upon by the membership.

Motion 29.10: The GA instructed the World Board to develop a position paper on the primordial role of smallholders and family farmers in the context of food sovereignty. This position paper should serve as the basis for the development of internal policies, advocacy and program development.

Motion 29.11: IFOAM recognizes the potentials and dangers stemming from regenerative energy production and will thus establish a working group to specifically deal with the application of organic farming principles in renewable energy production and utilization.

The following definition of "organic agriculture" was presented:

"Organic Agriculture is a production system that sustains the health of soils, ecosystems and people. It relies on ecological processes, biodiversity and cycles adapted to local conditions, rather than the use of inputs with adverse effects. Organic Agriculture combines tradition, innovation and science to benefit the shared environment and promote fair relationships and a good quality of life for all involved."

The GA also discussed and adopted numerous recommendations to amend "Program 2011," which, along with the adopted motions, will guide the work of IFOAM for the next three years.

South Korea was chosen as the location for the 17th IFOAM World Congress and General Assembly in 2011. Ë

BOD Minutes Highlights for 1st half of 2008

(Please see 'Inspectors Only' section of website for complete minutes. BOD minutes are posted in final form after approval by BOD.)

Jan. 31 Conference Call Present: Catherine Cash, David Konrad, Garry Lean, Gene Prochaska, Monique Scholz, Erin Beard (alternate acting as BOD member), and Margaret Scoles (ED). Absent: Bob Durst and Maheswar Ghimire.

Treasurer Gene Prochaska presented the Dec 31 2007 letter to Colin Presizniuk (audit response), drawing attention to changes already implemented, especially the increased separation of duties (financial record keeping and signing cheques). He also presented the Draft Audit Policy options from the Finance Committee. It was decided to obtain some additional information and eventually revise option 6 for adoption by the BOD. Option 6: Enlist the services of our accountant to perform increased role in financial oversight.

Canadian Committee Janine is currently the IOIA Canadian Committee Chair and serves many other important roles in Canada, some as a representative on behalf of IOIA and some as a representative of other bodies. The BOD feels assistance to the Canadian Committee is important. Bill Barkley has indicated an interest in chairing this committee. **Action Point:** Monique to contact Janine to see if she would like to enable Bill to have a go at this critical task.

March 1, in-person meeting in Retalhueu, Guatemala Present in person: David Konrad, Garry Lean, Gene Prochaska, Monique Scholz, Erin Beard (voting), Maheswar Ghimire, and Margaret Scoles (ED). Present via Skype: Bob Durst Absent: Catherine Cash. Monique move to approve Leanne McCormick as member of Accreditation Review Panel. Dave seconds. Motion adopted. Leanne replaces outgoing ARP member Stephen Grealy – Many thanks to Stephen!

AGM Ballot Committee was appointed, with Susan Colwell as chair, with Gabi Soto, Jean Hough and Carmela Beck as assistants. Moved by David Konrad and seconded by Maheswar Ghimire, that all checks greater than \$2000 require a second signature, from David Gardner, CPA. Motion approved. **Action Point:** Margaret to make appropriate arrangements with Gardner, including guidance on level of document review needed for each targeted transaction.

Committee Chair Policy Discussion re: Term Limits: The 2 year terms in the Bylaws for Committee chairs has no limit on it. Garry recommends following **Action Points:**

- ◆ Review by-laws to ensure that standing committees (and possibly our longstanding ad hoc committees that might not be ad hoc) are specifically listed in by-laws.
- ◆ Establish what are our actual ad hoc committees and revise the list on an annual basis.
- ◆ Figure out how committee chair terms can be renewed, overviewed etc. as per the bylaws.

Dave moves that the process of putting the Membership Committee into the Bylaws as a standing committee be activated. Erin seconds the motion. Motion adopted. **Action Point:** Dave will bring this motion to Bylaws Committee.

Certifier Involvement, Bylaws and Policies for BOD and other inspector issues: General discussion about certifier staff serving on BOD. Specific example: Dave has current involvement with QAI, a position which does involve inspector feedback. Clarified that the feedback reaches the inspector in an anonymous form. Relates to COI. Each BOD member must ensure these things are disclosed openly and if things may change during their term.

Margaret introduces Susan Colwell, specifying two potential roles:

- ◆ fundraising (volunteer)
- ◆ training management on-site on contract (paid).

Susan presented her interest in our organization's commitment to our sector. She then presented some of her fundraising ideas, which were warmly received by the BOD.

March 2, in-person meeting in Retalhueu Present: David Konrad, Garry Lean (out-going chair), Gene Prochaska, Monique Scholz, Erin Beard, Lidia Girón. Absent: Bob Durst, Stephen Bird

Informal meeting to determine composition of Executive Committee, urgent communications and date of next meeting.

It was agreed to form the Executive Committee as follows:

Chair: Bob Durst

Vice Chair: David Konrad

Secretary: Monique Scholz

Treasurer: Gene Prochaska

Director at large: Stephen Bird

March 17 Conference Call Present: Stephen Bird, Bob Durst, David Konrad, Monique Scholz, Erin Beard, Lidia Girón and Margaret Scoles, ED. Erin was present as voting alternate and Lidia as non-voting alternate, to keep abreast of BOD issues.

Moved by Monique, seconded by Stephen, to endorse Jim Riddle's candidacy for IFOAM Board seat. Motion adopted. ED will draft letter to this effect.

Training Issues Discussion: Policy for re-writing failing assignments: Margaret and Monique to draft policy, including background information. [continued on next page]

May 1 Conference Call: Present: Stephen Bird, Bob Durst, David Konrad, Monique Scholz, Gene Prochaska, Erin Beard (non-voting alternate), and Margaret Scoles, ED.

Gene presented the Financial Audit Policy. It was clarified that all cheques over \$2000 are to be signed by two persons. This is to be incorporated into the IOIA Policy Manual. **Action Point:** Margaret to set this up for next month. Moved by Stephen Bird, seconded by David Konrad, to adopt and implement the Financial Audit Policy. Motion passed.

Rita Wenzel has applied for Office manager position. BOD recommended to move forward with hiring her and juggle other staff hours as needed.

Jim Riddle and Joyce Ford will represent IOIA at IFOAM in June in Modena.

Discussion about Promotional contract work by Rebecca McClellan. Her primary job is to create updated promotional materials. She requested to work with one BOD member for oversight. Bob agreed to and will do ongoing monitoring to make sure she stays on track with IOIA purpose. Bob to provide updates to BOD.

Training in Pakistan - Four trainers expressed interest to response to Sacha's query of all Trainers, and two of those had withdrawn. No formal Trainer Request has been sent to Trainers. How does BOD feel given the security concerns? Consensus was that if we give trainers all the info and they are still willing to go then we can allow it.

May 29 Conference Call Present: Stephen Bird, Bob Durst, Monique Scholz, Gene Prochaska, Erin Beard (voting alternate), and Margaret Scoles, ED

Proposed by Erin Beard, seconded by Monique Scholz, to appoint Janine Gibson to Ethics committee. Adopted.

The BOD has reviewed the Membership committee recommendation regarding Mischa Popoff's application for membership. Moved by Bob Durst, seconded by Monique Scholz, to deny membership to Misha Popoff. Adopted.

2009 AGM location: Action Point: Monique to ask Canadians where they would like the meeting and who could help.

Guelph Conference: Moved by Erin Beard, seconded by Monique Scholz, to sign on as full sponsor of Guelph Conference 2009. Adopted.

July 17 Conference Call Present: Stephen Bird, Bob Durst, David Konrad, Gene Prochaska, Monique Scholz, Erin Beard, Lidia Girón and Margaret Scoles, ED. Erin was voting alternate during time that Monique was not on the call.

Margaret draws BOD members to the activity in Korea in her ED report. Important that all BOD members be more aware of Korea Organic Inspectors Association (KOIA) newly formed within about the past year and JOIA (active for many years). Through the Membership Committee and/or BOD, we need to put more effort into a true affiliate status.

Monique reports the results of her informal survey of Canadian members through the Canadian Forum. She expressed thanks to her Quebec IOIA inspector member colleagues Sylvia Welke and Christine Ouellet for responding so quickly. The results were strongly in favor of Montreal over Ontario locations.

Bob Durst reported that ED Evaluation is in progress.

Extensive fundraising discussion: with IOIA's Development Director, Susan Colwell, on the call. Susan asked the BOD for direction and priorities. Canadian standards project for training on both sides of the US-Canada border generally deemed one of the most important and timely. Dave Konrad accepted the position of BOD liaison for Fundraising. No committee at this time.

Discussion: Does doing eco-label inspector training fall within our mission? **Action Point:** If future 'eco-label' inspector trainings are requested, ED will consult with BOD liaison first before accepting. BOD liaison will determine if BOD should be informed or involved in decision making.

Committees: BOD liaisons designated.

- o Accreditation- Steve
- o CGG- Lidia
- o Canadian- Monique
- o Editorial Review Board – Steve
- o Scholarship – Gene

BOD clarified that Compensation and Working Conditions Committee was an ad hoc committee created in the past for a specific purpose. It has not been active for several years, so it is not currently an IOIA Committee.

BOD considered a proposal to amend the IOIA Policy regarding committees. One of the most significant changes is to replace current language on **Term Limits for Committee Chairs** to no more than 6 consecutive years, implementing by next AGM. Motion by Dave, seconded by Steve, that the BOD adopt as amended. **Action Point:** Send new wording as amended to BOD; BOD can amend further at next meeting if necessary. Ë

Impact of Flooding on Organic Food and Fields

By Jim Riddle

Organic Outreach Coordinator
University of Minnesota

Due to recent flooding of agricultural land throughout the United States, many reporters, farmers, inspectors, extension agents, food shoppers, and others are wondering about the impact of flooding on organic certification of affected fields and products. This article explores the immediate and long-term impacts of flooding on organic farms, foods, and fields.

By way of introduction, it is important to point out that in most instances, only low-lying portions of farms or fields are affected by floodwaters. Most farms, even when they suffer flood damage, have fields and crops that do not suffer any damage. For such fields and portions of fields, the food safety and organic status of their crops is unaffected.

Adulterated Food

For food crops, the Food and Drug Administration (FDA) considers any crop that has been subjected to flooding to be an "adulterated" commodity that cannot be sold for human consumption. This applies to organic and non-organic food crops.

According to a State organic certification agent, the FDA suggests a 30' buffer between flooded areas of fields and areas harvested for human consumption. To prevent cross-contamination, harvest equipment should not be driven through areas that were flooded. At least 60 days should elapse between flooding and planting of the next crop. Producers also need to monitor the quality of water used for washing food crops to make sure that only safe, potable water comes into direct contact with produce.

Certification Requirements

The specific National Organic Program (NOP) requirements that may apply to flooded fields and crops are §205.400(f), General requirements for certification; §205.670, Inspection and testing of agricultural product to be sold or labeled "organic"; §205.671, Exclusion from organic sale; §205.201(a)(5), Organic plan requirements for monitoring; §205.272(a), Contact with prohibited

substances; and §205.290, Temporary variances. If land is verified as contaminated with prohibited substances and needs to undergo transition to regain eligibility for certification, §205.202 Land requirements, would apply.

Residue Analysis

Under the NOP regulation, §205.670 states that a certifying agent may require pre-harvest or post-harvest testing when there is reason to believe that an organic agricultural input or product has come in contact with a prohibited substance. According to §205.671, if a crop is tested for residues and shows over 5% of the EPA tolerance for a given residue on a given crop, the crop cannot be sold as organic.

One problem with residue analysis is identifying what to test for. You can test for most pesticides, but it is difficult to test for fertilizers, which are very quickly immobilized by microorganisms and converted to biological forms. You can narrow the search by specifying the most likely contaminants you would expect to find, based on the kinds of crops grown in the area and what inputs are normally used on those crops.

Pathogens, such as salmonella and e. coli, can also be present after floods. Food samples, taken from representative areas of fields to be harvested for human consumption, should be tested for human pathogens.

If "adulterated" food is going to be diverted as organic livestock feed; if flooded pastures are going to be grazed soon after flooding; or if stored feed, such as large round bales were subjected to flooding, the certification agency may require testing for chemical residues or other prohibited substances. In addition, a farmer may want to test feeds for pesticides, pathogens, mycotoxins, or other contaminants to protect livestock health.

Another problem with residue analysis involves the need to take numerous samples from the affected area for the tests to be statistically valid. According to Dr. Francisco Diez, University of Minnesota, "if you want to get 100% assurance of pathogen absence, the number of samples would have to be quite large and given the price of those analysis

probably not cost-effective. If you have a field with 500 to 1200 units, you would need to test approximately 80 samples to have a 95% confidence that it would be free from pathogens." Dr. Diez recommends that any directly affected produce that will not be cooked be discarded. If food is to be cooked before consumption, it should be washed and cooked to at least 165 degrees F.

Public laboratories, such as those operated by some universities and state departments of health, agriculture, or environmental quality, should be approached to provide low-cost residue, pathogen, and mycotoxin analysis of food and feed from flooded areas.

Temporary Variances

Under NOP §205.290, temporary variances from certain requirements may be established for: natural disasters declared by the Secretary of Agriculture (or President); or damage caused by drought, wind, flood, hail, tornado, earthquake, excessive moisture, fire, or other business interruption.

Since "flood" and "excessive moisture" are specifically listed under §205.290(a)(2), a certification agency could request a temporary variance from the AMS Administrator.

In order to receive a temporary variance, the affected operator needs to make a written request to the certifying agent. The certifying agent reviews the request and may recommend to the AMS that the temporary variance be granted. The AMS Administrator approves the variance and sets a period of time under which the variance is allowed. The Administrator may also grant an extension.

The following NOP sections are eligible for consideration when temporary variances are requested:

- ◆ Soil fertility and crop nutrient practices - §205.203;
- ◆ Seed and planting stock practices - §205.204;
- ◆ Crop rotation systems - §205.205;
- ◆ Pest, weed, and disease management - §205.206;
- ◆ Wild crop harvesting standard - §205.207;
- ◆ Origin of livestock, feed, health care, and living conditions - §205.236-239;

- ◆ Handling (processing) requirements - §205.270;
- ◆ Facility pest management - §205.271; and
- ◆ Prevention of commingling and contact w/ prohibited substances - §205.272.

In order to be certified with a temporary variance, certain sections of the NOP regulation remain mandatory. These include:

- ◆ Recordkeeping Requirements - §205.103;
- ◆ Maintain or Improve the Natural Resources of the Operation - §205.200;
- ◆ Organic System Plan - §205.201;
- ◆ No Use of Prohibited Substances - §205.105 and §205.202(a);
- ◆ No Application of a Prohibited Substance 3 Years Prior to Harvest - §205.202(b);
- ◆ Distinct, Defined Boundaries and Buffer Zones - §205.202(c);
- ◆ Labeling Requirements - §205.300-311; and
- ◆ Certification Procedures - §205.400-406.

A temporary variance could apply to management practices (e.g. pastures flooded - have to confine livestock for an extended period of time; crop destroyed - have to deviate from the planned crop rotation and grow the same crop 2 years in a row; or, if a vegetable grower has to replant flooded fields, and has no source of organic seedlings). A temporary variance cannot be used to shorten the transition period, if land loses its organic status due to high levels of contaminants in floodwaters.

Future Certification of Flooded Fields

If a residue of a prohibited substance is present thru no fault of the operator, the land would not necessarily lose its certification, even if the crop cannot be sold for human consumption or if residues exceed 5% of the EPA tolerance and the crop cannot be sold as organic. The determination regarding the future status of the affected land is made by the certification agency.

Generally speaking, low levels of contaminants from floodwater would be considered unavoidable residual environmental contaminants (UREC) under §205.671, and therefore may not affect the land's certification, according to

several organic certifiers contacted for this article. However, if there is reason to believe that a high level of contaminants may have been carried in by floodwater due to nearby pesticide manufacturing or another industry producing potential contaminants, it would be advisable to test crops grown on that land the following year to see if 5% of the EPA tolerance is exceeded.

As indicated, a farm that is downstream from a source of concentrated prohibited substances, such as a chemical or fertilizer plant or sewage treatment facility that was flooded, would be of great concern regarding prohibited residues. In that case, the land could lose its certification if contamination levels in crops continue to exceed 5% of the EPA tolerance.

Certifiers report that they would be most concerned about any areas of a farm where floodwater has collected and deposited sediments. The water that just flows over the land is less likely to leave soluble prohibited substances. Dirt that washes in may be contaminated, however.

The time of year the flooding occurred may also be considered, since application of prohibited materials to non-organic neighboring fields tends to occur in the spring and early summer and may be more likely to migrate in floodwater at that time, as compared to flooding that occurs in late summer, 3 months after the application of these substances. The length of time the floodwater was present on the organic fields may also be taken into account when deciding organic certification status and possible long-term contamination.

Contact Your Certifier

It is critical for organic producers who have experienced flooding to contact their certification agency. One certifier I contacted plans to send a letter to all affected producers in declared flood disaster areas requesting that the agency be informed of the impact on their

operations (which fields/facilities; flood duration; standing water duration) and what possible contaminants they can identify.

Some certifying agents plan to send out inspectors to operations that have been flooded in order to confirm that flooded produce is not going to market; verify which fields or portions of fields were flooded; identify possible contaminants; and confirm changes to the operation's organic system plan. Farmers may need to supply information on how they are monitoring their operation to ensure compliance with NOP requirements. The attached forms, developed and supplied by MOSA, may be used as farm monitoring tools.

Next: 'Climate Ready' Gene-Altered Crops

A handful of the world's largest agricultural biotechnology companies are seeking hundreds of patents on gene-altered crops designed to withstand drought and other environmental stresses, part of a race for dominance in the potentially lucrative market for crops that can handle global warming, according to a report released by Ottawa-based ETC Group, an activist organization that advocates for subsistence farmers.

Three companies -- BASF of Germany, Syngenta of Switzerland and Monsanto of St. Louis -- have filed applications to control nearly two-thirds of the climate-related gene families submitted to patent offices worldwide, according to the report.

The applications say that the new "climate ready" genes will help crops survive drought, flooding, saltwater incursions, high temperatures and increased ultraviolet radiation -- all of which are predicted to undermine food security in coming decades. Company officials dismissed the report's contention that the applications amount to an intellectual-property "grab," countering that gene-altered plants will be crucial to solving world hunger but will never be developed without patent protections.

The report [at <http://www.etcgroup.org/en/>] highlights the economic opportunities facing the biotechnology industry at a time of growing food insecurity, as well as the risks to its public image.

Many of the world's poorest countries, destined to be hit hardest by climate change, have rejected biotech crops, citing environmental and economic concerns. Importantly, gene patents generally preclude the age-old practice of saving seeds from a harvest for replanting, requiring instead that farmers purchase the high-tech seeds each year.

Gene patents allow companies to limit others from marketing those genes. The 35-page ETC report, "Patenting the 'Climate Genes' . . . and Capturing the Climate Agenda," documents about 530 applications for climate-related plant genes filed at patent offices in the past five years. A few dozen patents have been issued; hundreds of others are pending.

The ETC report concludes that biotech giants are hoping to leverage climate change as a way to get into resistant markets, and it warns that the move could undermine public-sector plant-breeding institutions such as those coordinated by the United Nations and the World Bank, which have

long made their improved varieties freely available.

Among the report's concerns is the breadth of many applications. Protective genes are usually discovered in one variety of plant, and after minimal testing they are presumed to be useful in others. In one typical case, a BASF patent claim for a gene to tolerate "environmental stress" seeks to preclude competitors from using that gene in "maize, wheat, rye, oat, triticale, rice, barley, soybean, peanut, cotton, rapeseed, canola, manihot, pepper, sunflower, tagetes, solanaceous plants, potato, tobacco, eggplant, tomato, Vicia species, pea, alfalfa, coffee, cacao, tea, Salix species, oil palm, coconut, perennial grass and a forage crop plant."

Publicly funded developers of freely accessible plant varieties could succumb to biotech's market dominance, the report warns. One of the biggest is the Consultative Group on International Agricultural Research, which runs 15 research centers worldwide and is funded by several international aid organizations. CGIAR has long emphasized non-biotech breeding to develop varieties ideal for subsistence farmers and their local conditions.

Facing big budget cuts from its traditional funders, CGIAR is now a central player in a Bill & Melina Gates Foundation-funded collaboration with Monsanto and BASF -- a project that a CGIAR spokesman defended as a "global public good."

Other experts said that both sides have oversimplified the pros and cons of biotech crop patents.

"I don't mind Monsanto developing these tools. I mind that we don't have an economic ecology that lets other companies compete with them," said Richard Jefferson, founder and chief executive of Cambia, a nonprofit institute based in Australia that helps companies worldwide sort through patent holdings so they can build on one another's work instead of stymieing one another.

Under the current system for patenting genes, he said, "the little guys shake out and the big guys end up in a place a lot like a cartel."

Jefferson characterized the ETC report as extreme in its anti-corporate views but praised it for drawing attention to what he said is a real problem of corporate consolidation in the seed industry. Happily, he said, patent offices are "getting a lot better" about not allowing overly broad gene patents.

Rick Weiss, Washington Post, May 13, 2008

Int'l Report States GE Not the Answer to World Food Crisis

Sixty countries backed by the World Bank and most UN bodies have called for radical changes in world farming to avert increasing regional food shortages, escalating prices and growing environmental problems.

The authors of the 2,500-page *International Assessment of Agricultural Science and Technology for Development* [IAASTD] say the world produces enough food for everyone, yet more than 800 million people go hungry. "Food is cheaper and diets are better than 40 years ago, but malnutrition and food insecurity threaten millions," they write. "Rising populations and incomes will intensify food demand, especially for meat and milk which will compete for land with crops, as will biofuels. The unequal distribution of food and conflict over control of the world's dwindling natural resources presents a major political and social challenge to governments, likely to reach crisis status as climate change advances and world population expands from 6.7 billion to 9.2 billion by 2050."

The full IAASTD report is available at www.agassessment.org

ADM et al Defend Ethanol in Food vs Fuel Fight

A new group is adding its voice to the debate on using crops to produce alternative fuels such as ethanol amid rising food prices and shortages in some countries.

The Alliance for Abundant Food and Energy in Washington D.C. was created by Archer Daniels Midland Co, DuPont Co, Deere & Co, Monsanto Co and the Renewable Fuels Association (www.foodandenergy.org).

"There are critics who are trying to create an either-or decision between food and fuel," said Mark Kornblau, the alliance's executive director. "We believe this is a false choice. Today, more than 90 percent of crops in the United States and around the world are used exclusively for food."

The group believes that agricultural innovation -- such as genetically modified crops -- is the best way to address global hunger, not reducing biofuel production.

Decatur, Illinois-based ADM is one of the world's largest producers of biofuels, and Monsanto is a leading producer of GMO seeds.

Kornblau did not say exactly how much money the founding members contributed but said "the initial budget is in the multimillions."

The food versus fuel debate heated up as U.S. food prices last year saw their biggest increase in 15 years and are forecast to rise by 5 percent this year.

World food prices rose by 40 percent last year, causing food riots, hoarding and bread lines in some countries.

At the heart of the debate is to what degree the popularity of biofuels has contributed to the rapid rise in food prices.

Corn, soybean and wheat prices at the Chicago Board of Trade hit record highs this year amid increased global demand for food, rising oil prices and government mandates for biofuels.

About 34 percent of the U.S. corn crop this year will be used to make ethanol, compared with 23 percent last year, according to the USDA.

"Most credible studies say the rising price of food right now can be attributed to the high price of oil," Kornblau said. "To get your Idaho potatoes to Massachusetts or Florida, you have to have them shipped."

Crude oil prices have soared by 70 percent in the past 12 months and hit a record high of \$147.27 a barrel on July 11.

The new alliance faces tough opposition. Both livestock and food producers have lobbied to reduce or eliminate subsidies for ethanol. Their efforts may have succeeded to some degree.

The new U.S. farm law cuts the tax credit for corn-based ethanol by 6 cents to 45 cents a gallon beginning in 2009. The law extends the 54-cent import tariff on ethanol through 2010.

The Grocery Manufacturers' Association has criticized ethanol for driving up food prices.

Lisa Shumaker, Reuters, July 24 2008

Non-GM Crops Still Dominate World Agriculture

Non-GM crops bred using traditional plant breeding methods still provide most of the food and animal feed in the world, covering more than 97% of agricultural land compared with only 2.4% growing GM crops.

An analysis by the group GM Freeze shows that in fact over 90% of global arable land is used to cultivate non-GM crops. Even in the US, where GM crops have been widely adopted, over 85% of agricultural land is growing non-GM crops and two thirds of arable land grew non-GM crops in 2007.

For the full report, go to www.gmfreeze.org/

Monsanto Looks to Sell Posilac

After struggling to gain consumer acceptance, Monsanto on Aug 6 announced that it would try to sell its business of producing an artificial growth hormone for dairy cows.

The decision comes as more retailers, saying they are responding to consumer demand, are selling dairy products from cows not treated with the artificial hormone. Wal-Mart, Kroger and Publix are among the retailers that now sell house-brand milk from untreated cows. Almost all of the fresh milk sold by Dean Foods, the nation's largest milk bottler, also comes from cows that were not treated with the artificial hormone, a spokeswoman said. Monsanto officials said the decision was not related to the retail trend and that business for the artificial hormone, sold under the brand name Posilac, remained brisk. Monsanto, which is based in St. Louis and is the only commercial manufacturer of the hormone, declined to provide sales numbers.

The growth hormone, approved by the Food and Drug Administration in 1993, was one of the first applications of genetic engineering used in food production. When the artificial hormone, which is made in genetically modified bacteria, is injected into cows, it increases milk production by about a gallon a day. A 2007 survey by the Department of Agriculture said 17 percent of the nation's dairy cows were receiving it. Despite the government's approval, many advocacy groups have long maintained that Posilac is bad for the health of cows. Some even claim it could pose a cancer risk in people, though little scientific evidence has emerged to support that view. Their concerns have been fueled by the refusal of many countries, including Canada and members of the European Union, to permit the use of the hormone.

"I think they saw the handwriting on the wall and gave up," said Andrew Kimbrell, executive director of the Center for Food Safety, a consumer advocacy group based in Washington. "It's a major victory for consumers." Mr. Kimbrell said the original idea of marketing a growth hormone for milk production was flawed because milk is so emblematic of childhood. Fear of the effects of the artificial hormone was one of the primary drivers behind the growth of the organic dairy industry, he said.

Monsanto's announcement comes after a year of pitched battles over labeling on dairy packages. A year ago, Monsanto tried unsuccessfully to persuade federal officials to crack down on labels that say the milk has been produced without the hormone, arguing that milk from treated cows was the same as that from untreated cows. In the months since, a Monsanto-backed advocacy group and a handful of dairy organizations have struggled to have similar

laws or regulations passed at the state level. In Pennsylvania, for instance, the secretary of agriculture banned the labels, only to have his order overturned by the governor amid a consumer uproar.

Monsanto will continue to sell and market the product until a buyer is found. Posilac is sold in 20 countries.

Andrew Martin & Andrew Pollack, NY Times, Aug 6, 2008

Reality Check for Biotech PR Industry

Every year or so, the prestigious journal *Nature Biotechnology* publishes editorial comments that turn heads around the world. Its latest issue contains an editorial entitled "Join the dots." Its abstract states: "Pushing biotech as the 'solution' to the world's problems is doing more harm than good."

Some excerpts –

"Biotech is now the solution to feeding developing nations...renewable supply of energy...reducing the carbon footprint and global warming. Although biotechnologies can certainly help solve these problems, ramming that message down people's throats is hardly likely to convince the doubters."

"Take a recent case in point: the Biotechnology Industry Organization's (BIO) slogan for its annual meeting in San Diego in June was 'Heal, fuel, feed the world.'"

"There are hundreds of thousands of acres of GM crops being grown around the world, but they are not at present addressing key agricultural problems for poor farmers."

The editorial goes on to say that belief that biotechnology alone is going to "Heal, fuel, feed the world" requires "...an outrageous act of faith bordering on the religious." Amen.

Source: Nature Biotechnology, Vol. 26, 2008

No Coexistence

A new report shows the cultivation of genetically modified (GM) corn has caused a drastic reduction in organic corn cultivation and is making their coexistence practically impossible in Spain. Corn production is integrated in cereal cooperatives, which cover the production chain from the sale of seeds and inputs to commercialization, including technical advice. This system makes it difficult and expensive to segregate GM from organic and conventional production. Findings from the study, conducted by Rosa Binimelis of the Universitat Autònoma de Barcelona Institute of Environmental Science and Technology, appear in the April 2008 *Journal of Agricultural and Environmental Ethics*. E

IOIA Training Scholarships Available

IOIA is accepting applications for the annual Andrew Rutherford Scholarship Award, which provides full tuition for an IOIA-sponsored organic inspector training course during the following year. Both prospective and experienced inspectors are eligible to apply. It is awarded to an individual on the basis of need and potential as judged by the IOIA Scholarship Committee. Applicants can choose to attend any IOIA-sponsored training. The Scholarship pays for tuition, room and board but does not cover transportation or other expenses.

IOIA also offers the annual Organic Community Initiative Scholarship, which provides full tuition for an IOIA-sponsored basic organic inspector training during the following year. It is awarded to an individual on the basis of need and their potential to have a positive impact on their regional organic community. The Organic Community Initiative Scholarship is only open to applicants from outside of the US or Canada. Applicants can choose to attend any basic IOIA-sponsored training. The Scholarship pays for tuition, room and board but does not cover transportation or other expenses. For application materials and information on IOIA training programs, contact Margaret Scoles, IOIA Executive Director, IOIA, P.O. Box 6, Broadus, MT 59317-0006, Email ioia@ioia.net, or visit www.ioia.net to download application forms. The deadline for returning Scholarship applications is **October 1**. Scholarship recipients are notified by December 15. Æ

Meet Your Board

Stephen Bird – Director at Large

One of IOIA's newest board members is Stephen Bird, of Camino, California, which is located in the Sierra foothills outside the state capitol of Sacramento.

Steve grew up working on his family's farm near Modesto, located on the Tuolumne River. They raised beef cattle, grew alfalfa & walnuts. The family sold the farm when Steve was twelve and the buyer sold the lower portion of the farm to a sand and gravel company. Watching the land that his family worked and the river frontage he fished and swam along strip mined for sand and gravel had a major influence on his life, and he has been dedicated to the conservation of natural resources ever since.

Steve studied forestry at Oregon State University and

UC Berkeley, earning a B.S. in Forestry there in 1980. He worked as a silviculturalist for about five years before returning to school and earning teaching credentials in agriculture and life science in 1985. Bird taught high school biology for 5 years, after which he developed and established Celtic Gardens Organic Farm in 1999. The farm grows apples, table grapes, and pumpkins. Most crops are direct marketed. In 2007 the name of the farm was changed to Celtic Gardens Organic Farm and Learning Center to reflect the family emphasis on educational farm tours. They hosted about 500 children in 2007 and continue to grow every year. The tours teach about organic agriculture and importance of eating healthy local produce.

Bird began inspecting after taking IOIA Basic Farm Inspector training in Belmont, CA in 2001. He was convinced by neighboring farmer, Jim Zeek, longtime active CCOF member, that he could save everybody travel costs on their inspections if he got trained and did inspections nearby. He did 17 inspections in the Sierra Nevada Foothills that year. He subsequently took Advanced training in Wilsonville, Oregon in 2003 and Process training in Las Cruces, New Mexico in 2005. Today, Steve continues to increase his inspection work load, and now conducts Farmer, Handler, and Processor Inspections for domestic and international sales. He inspects to NOP, IFOAM, EU, CAAQ, and JAS standards, and expects to do about 100 inspections in 2008.

In addition to farming and inspecting, Steve also serves as a Chapter Leader for the "Going Organic" Program, organizing events, speaking on organic regulations, and mentoring farmers. "Going Organic" is a California State Water Board funded program that arranges activities that allow interaction between existing organic farmers and conventional farmers who may be considering transferring all or part of their operation to organic management.

Personal Comments from Steve: "I really like the social aspects of inspecting. Many Farmers and Processors love to tell you about their operations. It is fun to see what creative ideas people in agriculture can come up with to improve their products. I see my job as primarily communicator between the client and the certifier. I believe the client and the certifier both want the operation to be in compliance, and if I am effective in communicating the rules to the client and describing the conditions on the ground fully to the certifier then compliance should be possible."

Steve is a member of CCOF, Inc.; International Organic Inspectors Association (IOIA); Sierra Gold Chapter of CCOF; El Dorado County Farm Bureau; Apple Hill Growers Association; Pleasant Valley Grange; and the Organic Consumer's Association. He also serves on the Board of Directors of CCOF, Inc. (treasurer); IOIA; Sierra Gold (treasurer); California Farmer's Market Advisory Board; Apple Hill Harvest Run; Camino School Parent Club (President); Happy Place Montessori School (President); 4-H Livestock Advisory Committee (4-H: Market Goat Advisor); Charter Home Study Academy; Chess Club Advisor, Cross Country Coach; and Snowline Little League Baseball (coach).

IOIA salutes Steve and his dedication to organic integrity – welcome to the Board, Steve, we're glad to have you! Æ

**Reminder! IOIA Accreditation application
deadline is October 1**

2008 Calendar

Ongoing through November 30 Michael Fields Agricultural Institute's 2008 Workshop Series, offering over 40 individual workshops presented by farmers and other agricultural professionals. East Troy, Wisconsin. www.michaelfieldsaginst.org

Ongoing through October 18 PASA is pleased to provide a series of Farm Based Education (FBE) events that promote and demonstrate sustainable farming methods as well as technical instruction on many related topics. Topics include biocontrols in the greenhouse, greenhouse growing, disease and insect management, and value-added agriculture. Multiple Locations, Pennsylvania. www.pasafarming.org/programs/farm_based.htm

August 29 - September 1 Slow Food Nation, the largest celebration of American food in history, will bring together tens of thousands to experience an extraordinary range of activities highlighting the connection between plate and planet. The majority of Slow Food Nation's events will be free and open to the public. San Francisco, California. www.slowfoodnation.org/

September 1 Ohio Green Living Fayre
Join us for a day of workshops, exhibits, demonstrations, old-fashioned family games, horse drawn wagon rides, the OEFFA organic farm tour, fishing, music and more. The cost to attend is only \$5 per person and the event will go from 11 am to 6 pm. Johnstown (just east of Columbus), Ohio. www.ohiogreenliving.org

September 5 - 6 Taste Iowa, A Local Food Festival including: vendor's market; producer, consumer, and children's workshops; celebrity chef demonstration; recipe contest; Iron Chef contest; an 'All-Iowa' meal; live entertainment, and more! Conrad, Iowa. www.gnbbank.com/gnb_conrad.asp

September 18 - 19 Women in Agriculture & Small Business Conference. Oklahoma's Fifth Annual Conference will be held at the Moore Norman Technology Center in Oklahoma City, Oklahoma. www.greatplainsrcd.org

September 19 - 21 Common Ground Fair. MOFGA celebrates its 32nd Common Ground Country Fair in Unity, Maine. The Fair allows

fairgoers to make connections with a rapidly expanding base of organic farms in the state of Maine. www.mofga.org/TheFair/tabid/135/Default.aspx

September 21 6th Annual Southwest Michigan Community Harvest Fest. The beauty of fall makes this a special celebration of local foods, farming and sustainability. Purchase pumpkins, sorghum syrup and much more from 50-plus vendors. Keynote speaker is Will Allen of Growing Power, an urban agriculture and education program in Milwaukee. Scotts, Michigan www.fairfoodmatters.org/harvestfest/index.php or www.tillers.org/index.html

September 22 - 24 ELP Food Tour Conference 2008. The Environmental Leadership Program invites you to "The Politics of Food," a conference on how America grows, distributes, buys, and eats its food. Raleigh, North Carolina. www.elpnet.org/foodtour/conference.php

October 4 - 8 Restoring Our Urban and Rural Communities with Healthy Food. The Community Food Security Coalition's annual conference is back bigger and better than ever! Cherry Hill, New Jersey. www.healthyfoodconference.com/

October 4 - 9 Joint Annual Meeting: Geological Society of America-Soil Science Society of America-American Society of Agronomy-Crop Science Society of America-Gulf Coast Association of Geological Societies More than 10,000 scientists, professionals, and students will gather to discuss the latest research and current trends in energy, water resources, science education, earth systems, and related sciences. Houston, Texas. <http://www.acsmeetings.org>

October 15 - 17 9th GLOBALGAP Conference. Good Agricultural Practices are becoming more and more widely adopted with consumers demand for healthy safe and sustainably produced food driving their expansion. Cologne/Germany. www.globalgap.org www.avantel.de/globalgap2008

October 20 - 22 SWCS Farming With Grass Call for Papers. The Soil and Water

Conservation Society will convene a conference to address the factors driving change in mixed agricultural systems. Oklahoma City, Oklahoma. www.swcs.org/fwg

October 22 - 25 Holistic Management Conference. Come learn about "Paradigm Shifting for the Future" at the Holistic Management Conference in Brandon, Manitoba Canada. www.holisticmanagement.org/n7/nat_Gath/canada_conference.html

October 31 - November 2 The 23rd Annual Sustainable Agriculture Conference. Keynote speakers include sustainable ag legends Wes Jackson and Joel Salatin, and we'll be debuting extended, hands-on workshop formats. Anderson, South Carolina. www.carolinafarmstewards.org/events.shtml

Nov 12 - Growing US Organic Agriculture: Accessing the 2008 Farm Bill. Farmers, State Departments of Agriculture, Extension Service agents, certifiers, farm associations, land grant colleges, and others will learn how to access the new organic provisions in the 2008 Farm Bill, including crop insurance, data collection, research funding, certification cost share, funding for the National Organic Program, and the Environmental Quality Incentives Program. University of Chicago's Graduate School of Business. Presented by OTA, more info at www.ota.com, or contact Marissa Potter (mpotter@ota.com).

Nov 17 - 19 USDA's National Organic Standards Board will meet at the Savoy Suites Hotel at 2505 Wisconsin Avenue, N.W., Washington, DC 20007, phone: (202) 337-9700. <http://www.ams.usda.gov/>

December 4 - 6 The 2008 Acres U.S.A. Conference. The annual Acres U.S.A. conference sets the standards for innovation and learning. It is where you find farmers and consultants from every side of eco-farming who come together to share their experience and expertise. St. Louis, Missouri. www.acresusa.com/events/events.htm
